

CENTRIFY IDENTITY SERVICE

Make secure access to all services simple, across all your compatible devices.

The unstoppable trend towards BYOD, SaaS apps and “shadow IT” is driving password sharing and reuse. The inevitable result is greater exposure to attacks, lower productivity and higher support cost. These forces demand IT finds smarter ways to control access to critical business applications and data.

Centrify Identity Service is the answer. By eliminating the complications of multiple passwords this simple but powerful service makes accessing and managing SaaS and mobile applications secure and efficient for everyone.

EASE OF USE

Centrify Identity Service users don't have to remember multiple passwords across applications. Instead, a single password provides access to all the apps employees use whether they are on their desktop, laptop or mobile device. Eliminate the hassle of getting lost in a sea of passwords and never-ending helpdesk tickets for password resets.

UNIFIED MANAGEMENT

Centrify Identity Service unifies identity management, mobile device management and mobile application management and centralises IT control of cloud and mobile applications on all devices. With a fully multi-tenant architecture Centrify Identity Service allows service providers to efficiently manage multiple customers from a single cloud console.

Centrify Identity Service is a cross-platform service that supports all your compatible devices in one place, supporting all OS: Windows®, Mac®, iOS and Android™.

LESS RISK AND MORE PROTECTION

Centrify Identity Service offers additional security with multifactor authentication to ensure a secure log on from anywhere, and on any device. Eliminate the risk of easy-to-remember, reused and/or improperly managed passwords, reducing the risk of data breach. In addition, with integrated mobile device and application management, you can easily protect business data on mobile devices.

INCREASED PRODUCTIVITY

End-users will be more productive when they can use the devices of their choice for work, and when they don't need to spend time tracking down and resetting passwords. In addition, since Centrify Identity Service frees up valuable IT resources, thanks to fewer forgotten password calls, IT gains productivity as well. With Active Directory integration, user management becomes effortless for IT service providers. In this way, SSO greatly increases productivity for both end-users and IT service providers.

HOW IT WORKS

FEATURES

Secure single sign-on

One password for all. By entering the master password, end-users can access all their applications from desktop, laptop and mobile device.

Multifactor authentication

Add multifactor authentication to protect access to your users' Centrify Identity Service accounts or to individual apps within the portal. Centrify Identity Service supports MFA with mobile authenticator, email, SMS, security question or phone call.

Mobile device management

Mobile devices have become an integrated part of most businesses. Centrify Identity Service includes integrated cross-platform mobile device management, enabling IT service providers and end-users to lock, wipe and locate mobile devices, protecting business data in the cloud, and on devices.

Mobile application management

Centrify Identity Service enables service providers to deliver business and in-house mobile applications to end-users' corporate or personal devices. Centrify Identity Service supports installing business applications from Apple® Store and Google Play™. In addition, Centrify Identity Service also supports Apple Volume Purchase Program for paid mobile applications.

Active Directory support

Centrify Identity Service offers integration with Active Directory without replication of AD passwords for easy management of your customers and end-users. Centrify Identity Service also offers cloud directory for non-AD customers.

Flexible policy management

Customisable policy for single users or groups and can also be applied to manage devices and enforce app access rules.

Multi-tenant management

Multi-tenant administration to manage all customers from a single interface enables service providers to easily setup and manage all their customers from one single console.

TurnKey provisioning and single sign-on for Office 365

Centrify Identity Service addresses the challenge of identity and access for Office 365 by offering wActive Directory integration without ADFS and Provisioning without DirSync.

Reporting

Centrify Identity Service comes with over 40 built-in reports, and includes an interface for creating custom reports using standard SQL queries.
