

Release Notes: Avast Business Antivirus 20.3 (May 21, 2020)

Windows Antivirus: 20.3

Release Summary

This release contains new improvements and bug fixes to our Avast Business Antivirus client.

Avast Business Antivirus 20.3 will be available for new installations straight away. All existing devices with Avast Business Antivirus 20.2 or lower will start the automatic upgrade to 20.3 at a later time.

If you wish to upgrade your devices to 20.3 prior to the automatic upgrade, then you can create a new Task (Update device – Program update task) from your console.

A system reboot will be required to complete the installation. There will be no forced reboot unless you have set this in your device policy settings. Servers will never reboot regardless of your device policy settings.

Improvements

- **More privacy** - You now have the option to be protected from shady websites even in browsers that use the DoH protocol to encrypt the Domain Name System (DNS). Users can turn this on in their Real Site settings – **Unmanaged devices**
- **Improved Wi-Fi Inspector** - We've updated your Wi-Fi Inspector so that it's a lot more stable
- **Improved product stability**
