

Release Notes: Avast Business Cloud Management Console (April 10, 2019)

Console version: 7.3

Agent version: 4.10

Windows Antivirus: 19.3

Mac OS X Antivirus: 13.12

Release Summary

This release contains improvements and bug fixes to our Avast Business Cloud Management Console.

Improvements

[CBC-6293]	File reputation services setting is now available in the console under Device Settings > OS > General settings. As this setting is located on the Avast Antivirus, the same setting needs to be manageable from the console
[CBC-7786]	Protect more devices button will now show in the top navigation bar which will take you to the licenses page

Resolved issues

[CBC-7882]	Fixed issue with custom.ini file uninstalling components after installation, correct components are installed for selected license now
[CBC-8126]	Fixed issue where Secureline VPN was not installed after an update to the agent (where Secureline VPN went to a standalone component)
[CBC-8178]	Resolved some text alignments within the Help & Support section
[CBC-8225]	Updated our local update server help dialog with updated description on how it works

Known issues

[CBC-7010]	Some Mac Antivirus devices are showing in console as not being synchronized for more than 30 days
[CBC-6967]	Some devices experiencing issues with update and scan commands not starting from existing Tasks
[CBC-7100]	Unable to activate a device as the local update server
[CBC-7209]	Device name and platform filter not sorting correctly
[CBC-7317]	Email notifications and invitations for new administrators are not received
[CBC-7960]	Some XP devices are not updating via the master agent
[CBC-7721]	In some instances the VPN will not activate/install with Pro Plus
